

STRAW WARS

STRAWS SUCK

Billions of straws are discarded every year, filtering into landfills and littering the oceans. But with your help, this can change. The idea is simple—restaurants and bars will only provide a straw when requested by a customer. If you really want one, all you have to do is ask. It's that easy.

Why? Plastics are extremely detrimental to the environment, as they can't biodegrade, they last indefinitely - breaking down into smaller pieces, feeding into the food chain and potentially ending up on our dinner plates. Not ideal.

**WE'RE PROUD TO FLY THE STRAW WARS FLAG
— SAYING NO TO PLASTIC STRAWS**

DON'T BE A SUCKER
