WE'RE PROUD TO FLY THE STRAW WARS FLAG
- SAYING NO TO PLASTIC STRAWS

Billions of straws are discarded every year, filtering into landfills and littering the oceans. But this can change. The idea is simple—we just won't put a straw in your drink. It's that easy.

Why? Plastics are extremely detrimental to the environment, as they can't biodegrade, they last indefinitely - breaking down into smaller pieces, feeding into the food chain and potentially ending up on our dinner plates. Not ideal.

STRAWS SUCK
